

RINCON

CHANGE THE RULES

Rincon Technology is a pioneer in sustainability. In 2003, when Rincon's founders launched the company, their mission was to help reduce the cost, time, and environmental impact of building telecommunication networks. As such, sustainability has always been at the core of what we do.

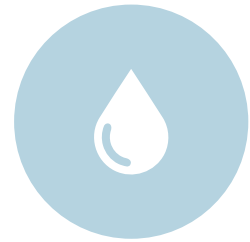

CIRCULAR ECONOMY

Rincon keeps equipment in use for as long as possible through our Investment Recovery Service. Only when end of life is realized do we recycle, following R2 recycling standards.

ENVIRONMENTAL MANAGEMENT

We acknowledge that there are externalities that result from business activity. We focus on minimizing waste through pioneering optimal business practices certified by ISO 14001 International standards.

RESOURCE EFFICIENCY

We make significant efforts to improve the usage of materials, energy, and water resources. Our goal is to maximize our output while minimizing the resources we use.

CARBON FOOTPRINT

We mitigate our carbon footprint by understanding our consumption. We analyze energy, business travel, daily commute, and operational waste to create a company culture to reduce and offset our usage.

CORPORATE RESPONSIBILITY

We are committed to our local communities by contributing to various green organizations. We support contributions made by our employees, promoting their well-being and personal development to enrich our work environment.

STAKEHOLDER ENGAGEMENT

We support the social responsibility and sustainability causes of our employees, customers, vendors, and partners. When we see our stakeholders seeking to make a difference we work hard to support them in their efforts.

ISO14001:2015, ISO9001:2015, OHSAS18001:2007, and R2:2013 Certified.
